ITMD361 Lab 7: Navigation Expert

Objective:
Turn the provided HTML and css files into separate top and side navigation bars.
- **For the turn-in, you will be comparing your css file with the css_comparison file. Do not Turn in an image of HTML comparison.**

Process:
1. Create a repository using the provided html file (index.html, page2.html, page3.html).
2. Do not change the structure of the HTML at all.
3. Write css code to do the following things based on the demos we did in class.
   a. Turn <nav> into a centered navigation list at the top of the page.
      i. A background color should stretch the entire length of the page.
   b. Turn <aside> into a side navigation bar on the right side of the page.
      i. The side navigation should scroll with the page (hint: fixed position).
   c. Both navigation bars should have no bullet points or underlines.
4. The following css declarations are all you need. Just find the right id to place them:

<u>For Navigation:</u>

background-color: blue;
overflow: hidden;
float: left;
width: 100%;
position: relative;
list-style-type: none;
margin: 0;
padding: 0;
position: relative;
left: 50%;
float: left;
float: left;
position: relative;
right: 50%;
display: block;
display: block;
padding: 10px 20px;
color: #fff;
text-decoration: none;
background-color: #000;
text-decoration: underline overline;

<u>For Sidebar:</u>

position: fixed;
right:0%;
background-color: red;
height: 100%;
width: 20%;
list-style-type: none;
text-align: center;
padding: 0;
display: block;
padding: 15px 0;
color: #fff;
text-decoration: none;
background-color: #000;
